

## USING THE SECOND WIND C3 ANEMOMETER WITH NOMAD 2

The C3 anemometer is an AC generator that produces a signal without any source of power other than the wind. Connect to this type of device by wiring its output (or “+”) terminal to a counter input **Cntr#** and its signal common (or “ground” or “-”) to a **Gnd** terminal. All the **Gnd** (NOMAD 2 signal ground) terminals are “bussed” together on the interface board, so any of these may be used if desired.
