RE: SWI Thermistor for Nomad 2 Temperature Measurement

To Whom It May Concern:

The SWI thermistor device is a Betatherm 10K3A as Rx in the following circuit:

Here are a few values:

Circuit Resistance, ohms	Temp, Deg. C
2,488	59.99
3,599	50.02
8,052	30.01
12,493	20.00
19,898	10.01
32,622	0.02

The above information should help to determine if other thermistor-based devices are compatible with Nomad2 and vice versa.

Sincerely,

Second Wind, Inc.
